

Problem

Given two integers dividend and divisor, divide them without using the multiplication (*), division (/), or modulus (%) operators.

Return the quotient obtained after dividing the dividend by the divisor.

Input Format

The first line contains an integer dividend. The second line contains an integer divisor.

Constraints

$-2^{31} \leq \text{dividend}$, $\text{divisor} \leq 2^{31} - 1$ $\text{divisor} \neq 0$

Output Format

Print the quotient.

Sample Input 0

10
3

Sample Output 0

3
