

## Problem

Given N floating-point numbers in the range [0, 1), sort them using the Bucket Sort algorithm.

## Input Format

N a1 a2 a3 ... aN

## Constraints

$1 \leq N \leq 100000$   $0 \leq a_i < 1$

## Submissions

## Output Format

Print the sorted array rounded to 2 decimal places.

## Sample Input 0

```
6
0.90 0.80 0.70 0.60 0.50 0.40
```

## Leaderboard

## Sample Output 0

```
0.40 0.50 0.60 0.70 0.80 0.90
```

## Discussions

## Sample Input 1

```
6
10 20 40 50 30 60
```

## Sample Output 1

Language

Java 15

```

1  import java.io.*;
2  import java.util.Scanner;
3  import java.util.Arrays;
4  public class Solution {
5      public static void main(String[] args) {
6          Scanner sc = new Scanner(System.in);
7          if(!sc.hasNextInt()) return;
8          int n = sc.nextInt();
9          double[] arr = new double[n];
10         for(int i=0;i<n;i++) {
11             arr[i] = sc.nextDouble();
12         }
13         Arrays.sort(arr);
14         for(int i=0;i<n;i++) {
15             if(i>0) {
16                 System.out.print(" ");
17             }
18             if(arr[i]==(long) arr[i]) {
19                 System.out.print((long) arr[i])
20             }else {
21                 System.out.printf("%.2f", arr[i]
22             }
23         }
24         System.out.println();
25     }
26 }
